

BUSINESS INSIGHT

Muhammad Farhan Adeva

OUTLINE

01. BACKGROUND

02. OBJECTIVES

03. RESULTS

04. CONCLUSION

BACKGROUND

Credit and **debit** cards have become one of the most **common transaction** methods used by consumers. Transaction activities not only reflect **individual spending** behavior but also provide valuable insights into **user profiles**, **financial capacity**, and **card usage patterns**.

By integrating these datasets, an in-depth analysis can be **performed** to **understand consumer behavior**, assess users' financial health, and evaluate card usage across different segments. Such insights can support **data-driven decision-making** in areas like marketing strategy, credit risk management, and the development of more tailored financial products.

OBJECTIVE

Transactions: Understand yearly and monthly transaction trends to identify growth patterns and seasonal dips.

Users: Analyze user profiles and spending behavior to segment customers by value and financial health.

Cards: Evaluate card usage distribution (Debit, Credit, Prepaid) to see preferences and growth potential.

RESULTS

Total Transactions	Total Amount	Average Transaction Per Users	Total Users
13.3M	\$571.84M	10.9K	1,219

Our dataset consists of **1,219 users** who together generated over **13.3 million transactions** with a total value of **571.84 million dollars**. On average, each **user performs around 10,900 transactions**, indicating a very high level of engagement with **card-based payments**. These figures highlight not only the **significant financial scale of the data** but also the **intensity of card usage** among a relatively small user base.

RESULTS

Insights – Monthly Transactions

- Overall transaction volume shows a **steady upward trend** over the years.
- February consistently records the **lowest transactions**.
- **Strong recovery and growth** in the following months.

Actions

- **Boost February** to launch **seasonal promos, cashback, or discounts**.
- **Sustain Growth** to **strengthen loyalty programs** to keep users active.
- **Leverage Trend** with plan campaigns ahead of peak months to **maximize impact**.

Total Transaction Per Month

RESULTS

Insights – Top 5 Merchant States

- CA leads with the highest transaction amount.
- TX and NY show **strong performance**.
- FL and IL **contribute less** but still significant.
- Transactions are **highly concentrated** in a few key states.

Actions

- Focus on CA, TX, NY with **strengthen partnerships & premium offers**.
- Grow FL & IL **targeted promotions** and **local merchant campaigns**.
- **Expand to other states** for replicate strategies from high performers.

Top 5 Merchant State

RESULTS

Insights – Users Card Type

- Debit cards dominate with 57.1% of users, showing preference for direct spending.
- Credit cards hold 33.5%, a significant portion indicating strong adoption of credit-based payments.
- Prepaid debit cards make up only 9.4%, suggesting limited penetration in this segment.

Actions

- For Debit Users to introduce rewards or cashback to encourage higher transaction frequency.
- For Credit Users to expand credit limit offers, installment programs, and exclusive perks to strengthen loyalty.
- For Prepaid Users to Promote prepaid cards through bundling with digital wallets or special discounts to increase adoption.
- Cross-Selling Opportunity To target debit users with credit card offers based on income and transaction behavior.

Users Card Type

RESULTS

Insights – Debt to Income Ratio

- Several users show a very high debt-to-income ratio (>300%–400%), with some reaching nearly 500%.
- This indicates a high credit risk, as users with extreme ratios may struggle to repay their debts relative to their income.
- The pattern highlights the importance of monitoring financial health and potential default risks among users.

Actions

- Risk Mitigation: Closely monitor users with ratios above the critical threshold (>300%).
- Credit Policy Adjustment: Restrict credit limit increases for high-ratio users or require additional checks before approval.
- Financial Education: Provide financial literacy programs or debt management simulations to help users reduce risk.
- Targeted Offerings: For users with healthy ratios, offer new credit products to capture growth opportunities.

Debt to Income Ratio

RESULTS

Insights – Total Transaction Per Card Type

- Debit cards **dominate transactions** with the highest volume, showing they are the preferred payment method.
- Credit cards account for a significant portion reflecting strong adoption but still below debit.
- Prepaid debit cards contribute the least, indicating limited use among customers.

Actions

- For Debit Users: **Maintain engagement by offering cashback or rewards to reinforce loyalty**, since debit is the most used.
- For Credit Users: **Encourage higher usage with installment options, higher credit limits, and exclusive perks.**
- For Prepaid Debit Users: Increase adoption through bundling with **e-wallets, promotions for younger customers, or as an entry product for unbanked users.**
- **Cross-Sell Opportunity:** Transition active debit users toward credit card products based on their transaction history and financial health.

Total Transaction Per Card Type

RESULTS

Insights

- **Spending increases** in line with income (positive correlation).
- Outliers show different saving/spending behaviors.

Actions

- Segment customers (high spenders, savers, middle).
- **Offer premium products** to high-income spenders.
- **Promote savings/investment** to high-income savers.
- **Push targeted promos** for middle-income customers.

Yearly Income VS Spending

RESULTS

Insights

- High-Value Customers: Top 3 clients (ID 96, 1686, 1340) drive the largest spending.
- Dependence Risk: Revenue heavily relies on a small group of users.
- Clear Segmentation: Spending patterns allow grouping into High, Medium, and Low-value segments.

Actions

- Exclusive Loyalty Program: Create VIP benefits for top clients to boost retention and spending.
- Behavior Analysis: Study purchase habits of top spenders to replicate success with similar customers.
- Value Growth Campaigns: Use personalized upselling and cross-selling to increase average transaction value.
- Segment Targeting: Launch tailored promotions for medium- and low-value customers to grow overall CLV.

Total Amount Per Users

Conclusion

Monthly Trend: Transactions grow steadily, February consistently lowest → needs seasonal promotions.

Geographic Insight: CA, TX, and NY lead in transaction value, FL and IL hold growth potential.

Card Usage: Debit cards dominate, credit cards significant → opportunity to boost balanced usage.

Financial Health: Some users show very high debt-to-income ratio → potential credit risk.

Income vs Spending: Positive correlation, with outliers → chance to design tailored financial products.

Customer Base: Heavy reliance on a few top clients → loyalty programs and diversification are key.

THANK
YOU!!
